PROJECTS

helloHiker | [Repo](#) | [Heroku](#): Summary: A social media application for hikers and trail goers. You can search National Park trails throughout the US. Allow users to create profiles which will store all trails they have hiked, ones they hope to complete in the future and all them to post, rank, and comment on them.

Employee Database | [Repo](#) | [Video Demonstration](#): Summary: Created a command-line application in a **CMS (Content Management System)** format, that an employer could use to view, update, add, & delete employee information using **Inquirer package**. Also utilizing **MySQL2 packages** to be able to connect to the **MySQL** database to perform queries & the **console.table package** to print **MySQL** rows to the console.

J.A.T.E (PWA) | [Repo](#) | [Heroku](#) Summary: Created a text editor that runs in the browser. The app is a single-page application that meets the PWA criteria. Implemented methods for getting and storing data to an **IndexedDB** database. The app also fully functions while offline!
